Project Title - *Aarogya+ : AI-Powered Smart Health Assistant*

Team Name - *Health Hackers*

Team Members : ***VIVEK PRASAD***
Frontend

ANSHIKA SINGH
Integration

KANISHK CHAHAR
Backend

ANKIT PANDEY
AI/Logic

Track Chosen : *HealthTech*

PROBLEM STATEMENT & TARGET AUDIENCE

Problems We Are Solving :

India faces a critical healthcare accessibility gap, especially in rural and semi-urban regions.

- Early health awareness and preventive care.
- Timely access to doctors and verified medical guidance.
- Medicine adherence and safety monitoring.
- Personalized Indian lifestyle-based diet guidance.

Healthcare today is fragmented, reactive, and inaccessible for millions of Indians.

This leads to :

- Late diagnosis.
- Poor treatment compliance.
- Increased preventable health risks.

Target Users :

Primary Users (B2C):

- Rural population with limited doctor access
- Urban users needing daily health management
- Elderly patients with medicine adherence needs
- Students & working professionals (mental + physical health)

Secondary Users (B2B):

- Clinics
- NGOs
- Rural healthcare workers

Age Group:

- 15-60+

Our Unique Solution – Aarogya+

Key Features

🌐 **Unified AI-powered health assistant with Hindi + English rural support**

🤖 **AI Symptom Checker with risk-level classification**

🕒 **Medicine reminders with drug interaction alerts**

🥗 **Indian diet planner aligned with local habits**

Aarogya+
Unified AI
Health Engine

Why It's Different

🔗 **Combines healthcare, safety, mental health & lifestyle in ONE Web app**

🇮🇳 **Built specifically for Indian users & rural healthcare needs**

🛡️ **Uses explainable rule-based logic instead of black-box AI**

📶 **Works in low-connectivity environments**

Tech Stack + Architecture

Tech Stack

● Frontend

React (Web) / Flutter (App)
Clean, mobile-friendly Web UI

● Backend

Node.js / Firebase
REST APIs & Auth

● Database

Firestore / MongoDB
Users, symptoms, meds

● Logic + AI

Rule-based engine
Optional AI APIs

Implementation Flow

Architecture

 User App (Web / Mobile)

 Backend APIs (Node / Firebase)

Logic Engine

Symptom & risk rules

Medicine + lifestyle logic

Database

Alerts & Insights

Risk level + Reminders

Health suggestions

Feasibility and Showstoppers

Feasibility

● Clear scope & modular design

Aarogya+ is divided into independent modules (Symptom Checker, Medicine Reminder, Mood Tracker, Diet Planner), allowing parallel development by team members

● Hackathon-friendly tech stack

Uses proven and fast tools like React / Flutter, Node.js, Firebase, and rule-based logic, ensuring quick setup and reliable implementation.

● Rule-based intelligence (not heavy ML)

Avoids complex model training; uses predefined medical rules and mappings—faster, safer, and explainable for healthcare use.

Showstoppers & Mitigation

● Risk: Medical accuracy & misdiagnosis

Mitigation: Limited to common conditions + clear “Consult Doctor” disclaimer

● Internet dependency in rural areas

Mitigation: Core logic works offline; internet only for optional APIs

● Data privacy concerns

Mitigation: Uses dummy/sample data; no real patient records stored

USP & BUSINESS MODEL

★ USP (What Makes Aarogya+ Unique)

Unified Health Platform : *Symptom checking, medicine safety, mental health, and Indian diet in one app*

India-First Design – *Hindi + English support with rural healthcare focus*

Safe & Explainable Logic – *Rule-based health insights with clear risk levels*

Low-Connectivity Ready – *Core features work even with limited internet*

💰 Business Model

Freemium for Users (B2C) – *Essential health features free, premium insights later*

B2B Partnerships – *NGOs, clinics, and government health programs*

Future Integrations – *Telemedicine, pharmacies, and lab services*

Scalable & Cost-Effective – *Lightweight tech stack enables wide adoption*

Conclusion – Aarogya+

- One unified AI health platform for awareness, safety, mental health, and Indian lifestyle care
- Designed for India, especially rural and low-connectivity environments
- Safe, explainable, and feasible using rule-based logic and proven tech
- Scalable beyond hackathon with strong adoption and partnership potential

THANK
YOU
